

Mongoid

Mongoid is the officially supported ODM (Object-Document-Mapper) framework for MongoDB in Ruby.

- Mongoid (6.1.0)
 - Installation
 - Documents
 - Persistence Methods
 - Queries
 - Relations
 - Nested Attributes
 - Callbacks
 - Validation
 - Indexes
 - Rails Considerations
 - Upgrade Mongoid
- Mongoid (5.2.0)
 - Installation
 - Documents
 - Persistence Methods
 - Queries
 - Relations
 - Nested Attributes
 - Callbacks
 - Validation
 - Indexes
 - Rails Considerations
 - Upgrade Mongoid

Additional Mappers

In addition to Mongoid, several other mappers are available:

- [MongoMapper](#)  from John Nunemaker
- [MongoODM](#)  from Carlos Paramio
- [DriverAPILayer](#)  from Alexey Petrushin

All the mappers build on top of the basic Ruby driver and so some knowledge of that is useful, especially if you work with a custom MongoDB configuration.
